- English: Fluent (C1)
- Danish: Module 4 (out of 5)

SKILLS

Hard Skills

- React
- TypeScript
- Node.js
- Next.js
- Git
- C#
- Java
- PostgreSQL
- MongoDB
- AWS

Soft Skills

- Eagerness to learn
- Curiosity
- Communication
- Team work
- Stakeholder Management
- Dependability

📄 Professional Profile

Software Engineer and MSc student in **Autonomous Systems** with hands-on experience building modern web applications and production software. Currently working as a **Student Software Developer** at **the LEGO Group**, contributing to frontend development and collaborative software engineering workflows. Experienced with **TypeScript and React**, complemented by C#, Python, and modern development, testing, and CI/CD practices.

I particularly enjoy turning ideas into clear and intuitive user experiences, with attention to the small details that make an interface feel natural to use. I am looking to develop further as a **Frontend Developer** while bringing my broader software engineering experience and understanding of end-to-end systems into frontend development.

📁 Professional Experience

Student Software Engineer, The LEGO Group, Edge Platform

August 2023 – Present

Develop and maintain production software across **frontend**, **backend**, and **edge systems** using **TypeScript**, **React**, **AWS**, and **Docker**. Introduced **network-condition simulation** into end-to-end testing of physical edge devices, improving robustness under unreliable and constrained network conditions across global production sites. Automated parts of the **API development workflow**, simplifying endpoint integration. Collaborated within an engineering team using **Git**, **CI/CD**, code reviews, and automated testing.

Bachelor Thesis – Software Engineer, GLS Denmark, EV Charging Optimization

March 2025 – December 2025

Developed an **EV charging optimization platform** for GLS Denmark as part of a three-person engineering team. Built a distributed **microservice architecture** integrating electricity-price **APIs** and **MongoDB**, with a **single-page web application** for managing and visualizing optimized EV charging schedules.

🎓 Education

Master's degree, Autonomous Systems

DTU | Technical University of Denmark, Kongens Lyngby

February 2026 – Present

Bachelor's degree, Software Technology Engineering

VIA University College, Horsens

August 2022 – January 2026

AP degree, Computer Science

Zealand Academy, Roskilde

August 2021 – July 2022

Relevant Projects

Software Engineer Internship, the LEGO Group, API Scaling

August 2024 – December 2024

Completed a full-time 5-month internship, contributing to multiple features across the code-base. Notably, automated the **API development** process, improving **endpoint integration** for the **frontend**, **CLI**, and **customer applications**.

Freelance Web Developer, Apartments in Poland, Webpage Development

December 2023 – April 2024

Built and delivered a fully responsive **React** website for a Polish apartment rental business based on a client-provided **Figma** design. Worked directly with the client throughout development, translating the design into a responsive interface and incorporating stakeholder feedback. You can visit the website at apartamenty.dolinastrazyska.pl.

Web Developer, Portfolio, Webpage Development

Designed and developed a personal portfolio using **Next.js**, **TypeScript**, **Tailwind CSS**, and **Motion**. Built responsive and interactive role-specific experiences while keeping the architecture reusable and maintainable through shared components.

About me

I am **24** years old, born in the **Czech Republic**. I live in **Kongens Lyngby**, where I also attend the Technical University of Denmark.

My biggest passion outside of my career is being a hybrid athlete. After completing **IRONMAN** Copenhagen, two **IRONMAN 70.3** races, and several shorter triathlons, I continue to look for new physical challenges alongside my professional ones.

As an extracurricular activity, I like to attend **hackathons** and networking events such as **social runs**. Furthermore, I like to boost my creative side by playing on a **Minecraft** server in collaboration with my friends.

I very much enjoy a good beer with a **football** match or **BBQ** in the background and any kind of delicious **food**!

ACHIEVEMENTS

IBM Cloud Computing
Cambridge C1 English
IRONMAN Finisher

HOBBIES

Football
Triathlon
Puzzles
Travelling
Social Runs
Cooking & Eating
Motorbike
